ABOUT

I have experience with many aspects of software engineering, but back-end development is my one true love. This was before I got really into complex front-end development. Now I love both. Because I know you can't do much without either one of the front-end and back-end. I convert my weaknesses into productivity, the same way laziness drives me to make a task as easy as possible, utilizing the power of a language/framework. I am a man of many interests, securing web applications - or breaking them - for fun, while being a time-travel-fiction nerd (who doesn't want to turn back time right?) . Oh! and let me yap about how I made a solar system for my home myself.

EXPERIENCE

May 2024 – Present | Software Engineer (SpringBoot/Angular) | MillenniumIT ESP

- Developed back-end services using Spring Boot, delivering clean, maintainable, and scalable code.
- Optimized performance using Spring Batch for batch processing and multi-threading for concurrent execution. Reductions in REST API consumptions from 20 minutes to 20 seconds using the business logic and the process optimization.
- Attended to Code refactoring focusing mainly on bottlenecks the current implementation had. Refactored code for a better memory usage and inter-component communications (such as requests for Databases)
- Worked with Angular 14 and 16, optimizing large code bases through modularization.
- Introduced standalone components in Angular 16 to improve re-usability.
- Utilized RxJS for state management, leveraging Behavior-subjects for reactive data handling.
- Extensively used Angular services for efficient state management and data sharing across components, replacing @Input and @Output for multi-level communication.

Nov 2022 – Apr 2023 | Intern Information Security Engineer/Cyber Security Analyst | BugZero.io

- Knowledge Sharing Session on MITRE ATT&CK Framework, Organized and presented in awareness sessions about cyber-security and bug hunting for undergraduates and high-school students. Those sessions were held out of University of Kelaniya + Youtube Live Streams for the High School Students.
- Tested the security of in-house applications by deploying them on Google Cloud Platform.
- Assisted in creating datasets for Large Language Models (LLM) for analyzing threat reports.

PROJECTS

qr-file-exfil | : React, QR Code Spec. Personal Project 2023

- Method of exfiltrating data over a restricted device.
- Tries to keep minimum auditable logs and forensic traces.

CryptoZombies | : Solidarity Personal Project2023

- Following along the course of CryptoZombies

HackerNews | : React, Algolia REST Api Personal Project 2023

- Clean interface for browsing the HackerNews
- Uses Algolia API to fetch the latest stories and comments.

miCar | :React, React-Native, Firebase, Google Maps API UCSC 2022

- An application for all of your vehicle needs. Gather data in the palm of your hand. Send reminders for important dates.

Grocery Galleria | :MVC, REST, PWA, Google Maps API UCSC 2021

- Developed a PHP application from scratch using MVC architecture.
- Grocery Galleria is an e-commerce platform for small/mid-scale entrepreneurs to have online exposure. The idea was to give the customers the same experience that they have when they are shopping traditionally.
- Customers can see the selected shops from their region, order from multiple shops, and deliver those orders by a single rider.

TECHNICAL SKILLS

- Languages, frameworks: Javascript, Angular, SpringBoot, Java, React, Python, PHP, MySQL
- Application Security: MITRE Attack, BurpSuite, OWASP Top 10, Nmap, Postman, Documentation
- Version control: Git, Azure DevOps, BitBucket, GitLab
- Cloud: GCP, Azure

SOFT SKILLS

- Growth mindset
- Remaining calm under pressure
- Continuous learning

CERTIFICATIONS

- IBM edX Verified Blockchain Essentials Professional Certification
- WSO2 Linux Systems Administration and DevOps Engineering Training Program by WSO2 :
  Six month program on Linux System administration and DevOps. Got hands-on experience with Linux in a cloud environment and using deployment methods such as automated deployment using Ansible and Terraform.
- Introduction to Quantum Computing Course 2020/2021 :
  Year long program on foundational understanding of quantum computing, including basic linear algebra, quantum mechanics, quantum computation and information, and quantum algorithms. Each week students participate in three activities: a 1.5-hour lecture, a 1-hour lab with a Teaching Assistant, and a homework assignment.
- WSO2 WSO2 Certified Identity Server Practitioner - V5 Certification
- WSO2 WSO2 Certified API Manager Practitioner - V4 Certification
- IBM edX Verified Blockchain Essentials Professional Certification
- Microsoft Microsoft Certified: Azure Data Fundamentals Certification
- Microsoft Microsoft Certified: Azure Fundamentals Certification
- FreeCodeCamp Responsive Web Design Certification
- Coursera Cloud Architecture with Google Cloud Specialization Certification
- Coursera Networking in Google Cloud Specialization Certification
- Coursera Security in Google Cloud Platform Specialization Certification

EDUCATION

BSc. (Hons) in Computer Science
University of Colombo School of Computing
Mar 2020 – May 2024

Research: Consensus Based Cooperative Localization on Untrusted Devices - Blockchain, Bluetooth and Nearby Communication technologies, Distributed Systems, Localization, Proof-of-Location, Proof-of-Delivery.

G.C.E. Advanced Level
Royal College, Col. 07
Aug 2018

Air-Force Cadet: Participated in Hermann Loos Championship preliminary selections at Diyathalawa.
Senior Member of the ICT Society: Participated in various inter-school ICT competitions.

OTHER INTERESTS

- Sustainable living
- Cyber Security
- Hands-on DIY projects
